2. php bin/magento setup:upgrade
3. php bin/magento setup:di:compile
4. php bin/magento setup:static-content:deploy -f

# 👉 How To Configure AutoApply Coupon Code ?

## 1. Login Into admin >> Stores >> Configuration

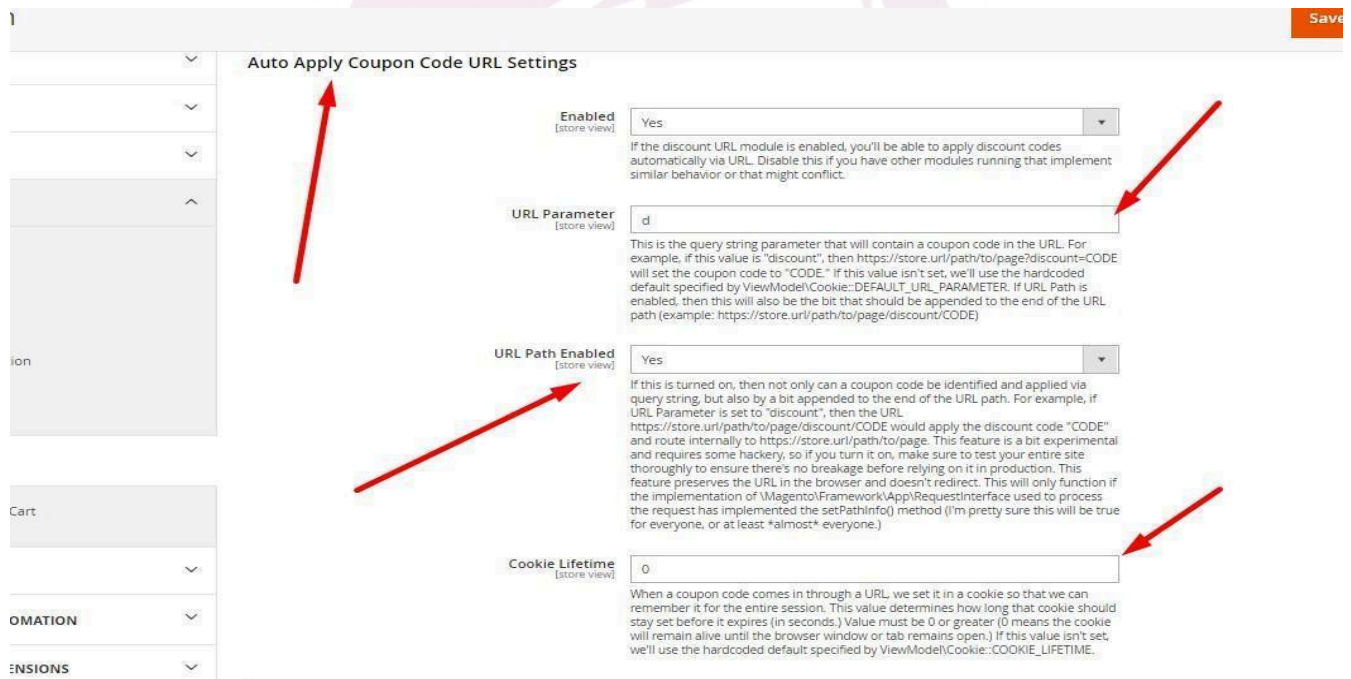

## 2. Customers >> Promotion

The screenshot shows the Magento 2 Configuration page. On the left is a vertical navigation menu with categories: SALES, CATALOG, CUSTOMERS, MARKETING, CONTENT, REPORTS, AIMSINFOSOFT, STORES, SYSTEM, and FIND PARTNERS & EXTENSIONS. The 'CUSTOMERS' category is expanded, showing sub-items: Login as Customer, Newsletter, Customer Configuration, Wish List, Promotions, and Persistent Shopping Cart. The 'Promotions' sub-item is highlighted with a red box. A red arrow points from this box to the 'CUSTOMERS' category in the main configuration area. Another red arrow points from the 'Promotions' sub-item to the 'Promotions' section in the main configuration area. The main configuration area is titled 'Configuration' and has a 'Save Config' button in the top right. It contains several sections: State Options, Locale Options, Store Information, and Single-Store Mode, each with a dropdown arrow.

## 3. Auto Apply Coupon code url Settings

The screenshot shows the 'Auto Apply Coupon Code URL Settings' configuration page. The page title is 'Auto Apply Coupon Code URL Settings' and there is a 'Save' button in the top right. The configuration includes the following fields:

- Enabled** (store view): A dropdown menu set to 'Yes'. Below it is a note: "If the discount URL module is enabled, you'll be able to apply discount codes automatically via URL. Disable this if you have other modules running that implement similar behavior or that might conflict."
- URL Parameter** (store view): A text input field containing 'd'. Below it is a note: "This is the query string parameter that will contain a coupon code in the URL. For example, if this value is 'discount', then https://store.url/path/to/page?discount=CODE will set the coupon code to 'CODE.' If this value isn't set, we'll use the hardcoded default specified by ViewModel\Cookie::DEFAULT\_URL\_PARAMETER. If URL Path is enabled, then this will also be the bit that should be appended to the end of the URL path (example: https://store.url/path/to/page/discount/CODE)".
- URL Path Enabled** (store view): A dropdown menu set to 'Yes'. Below it is a note: "If this is turned on, then not only can a coupon code be identified and applied via query string, but also by a bit appended to the end of the URL path. For example, if URL Parameter is set to 'discount', then the URL https://store.url/path/to/page/discount/CODE would apply the discount code 'CODE' and route internally to https://store.url/path/to/page. This feature is a bit experimental and requires some hackery, so if you turn it on, make sure to test your entire site thoroughly to ensure there's no breakage before relying on it in production. This feature preserves the URL in the browser and doesn't redirect. This will only function if the implementation of \Magento\Framework\App\RequestInterface used to process the request has implemented the setPathInfo() method (I'm pretty sure this will be true for everyone, or at least \*almost\* everyone.)"
- Cookie Lifetime** (store view): A text input field containing '0'. Below it is a note: "When a coupon code comes in through a URL we set it in a cookie so that we can remember it for the entire session. This value determines how long that cookie should stay set before it expires (in seconds.) Value must be 0 or greater (0 means the cookie will remain alive until the browser window or tab remains open.) If this value isn't set, we'll use the hardcoded default specified by ViewModel\Cookie::COOKIE\_LIFETIME."

Four red arrows point to the 'Enabled', 'URL Parameter', 'URL Path Enabled', and 'Cookie Lifetime' fields.

Do configuration as per above screenshot.

## Field Knowledge :

### ❖ **Auto Apply Coupon Code URL Settings Field :**

- **Enable:** Select "Yes" to enable the module.
- **Url parameter:** Enter the URL parameter. When this parameter is present in the URL, the coupon code will be applied.  
Example: [www.example.com?\[/Url Parameter\]=\[/Coupon Code\]](http://www.example.com?[/Url Parameter]=[/Coupon Code])
- **URL Path Enabled:** When this path is enabled, you can apply the coupon code using the URL structure:  
<https://store.url/path/to/page/discount/CODE>
- **Cookie Lifetime:** Enter the cookie lifetime. Once the coupon code is applied, it will be removed from the cookie after the specified time. If this is not set, the cookie will expire automatically when the user closes the browser tab.

Finally, save the configuration by clicking on "Save Config".

# 👉 Output:

The screenshot displays the LUMA website interface. At the top, there is a navigation bar with links for 'What's New', 'Women', 'Men', 'Gear', 'Training', 'Sale', 'Request Data', and 'test: demo'. A search bar is located on the right side of the navigation bar. Below the navigation bar, a green banner displays a message: 'Discount code AUTOTEST2022 will be applied to your order during checkout unless you've already fully consumed it (code is only valid for up to 200 orders per customer)'. The main content area features a promotional banner for 'New Luma Yoga Collection' with the text 'Get fit and look fab in new seasonal styles' and a 'Shop New Yoga' button. Below the banner, the 'Shopping Cart' section is visible. The cart contains one item: 'Olivia 1/4 Zip Light Jacket' with a price of \$77.00 and a quantity of 1. The subtotal is \$77.00. A red box highlights the 'Discount (AUTOTEST2022)' row in the cart summary, which shows a discount of -\$10.00. The 'Order Total' is \$72.00. A 'Proceed to Checkout' button is located at the bottom of the cart summary. A red box also highlights the 'Apply Discount Code' section, which shows the code 'AUTOTEST2022' and a 'Cancel Coupon' button. The footer of the page features the text 'YOUR SUCCESS IS OUR AIM'.
